

Functional Communications

Purpose of Functional Communications at PMNCH Board Level:

The various global organizations that make up the Board of the Partnerships are involved in many projects and programmes and continue to develop initiatives outside of the Partnership. Some of those activities complement or potentially impact upon the work of the PMNCH.

Sharing these activities with the other Board Members would enhance the function of the Partnership and where initiatives are under consideration allow for constructive input from the Board as indicated. This sharing would also allow a mutual transparency of purpose across the Board Agencies and potentially, synergistic planning.

Considerations for functional communication by the Board:

- Board Members submit to Board / Chair for consideration initiatives they would like to discuss or have discussed at each Board Meeting. Activities or initiatives shared during the Board Meeting would include those pertaining to MNCH health at global level;
- The PMNCH website has a page dedicated to describing relevant Global Initiatives that complement the work of the PMNCH.
