Dramatic decline in child deaths after scale-up of vaccines

Decline in under-5 mortality in Gavi supported countries

- 8.4m deaths in 2000
- 4.7m deaths in 2017
- -44% decrease

Much steeper decline in deaths from vaccine-preventable diseases

- 2m deaths in 2000
- 0.6m deaths in 2017
- -71% decrease
Immunisation continues to reach more households, including the poorest

Highest coverage …… and most equitable

Median coverage of key interventions in Gavi-supported countries

Coverage of services in the poorest decile

- DTP3 vaccination: 63%
- Careseeking for Pneumonia: 57%
- Family planning: 53%
- Antenatal care: 38%
- Sanitation: 20%

Note: UHC Global Monitoring Report: includes 96 countries with a Demographic and Health Survey or Multiple Indicator Cluster Survey, latest survey for each country, 2010-2017. Estimates are averages of country values weighted by population.
Zero dose child is a marker of acute inequity

2 out of 3 zero dose children live in households surviving on less than $1.90 a day
Differentiation showing encouraging trends (2015-2018)
